

Collection delay shifts cash needs

A four-period synthetic fixture keeps billings and cash costs fixed

UNFUNDED GAP AFTER THE ASSUMED BUFFER

0 SCU

No lag

0 SCU

One-period lag

20 SCU

Two-period lag

SYNTHETIC TEST DATA - internal output-format demonstration

SCU is not a real currency. Internal format test; no client or accounting conclusion.

The scenario holds billings and costs constant

400 SCU

Billings

same in all cases

240 SCU

Cash costs

same in all cases

100 SCU

Available buffer

assumption only

Assumptions are artificial test inputs; the fixture does not model revenue recognition, taxes, customer credit risk or actual financing.

Buffer gap by collection delay

SYNTHETIC CASH UNITS

Only the two-period delay leaves a gap
Unfunded amount beyond the assumed 100 SCU buffer

Only receipt timing changes across the three cases

Lag	Cash trough	Funding need	Buffer	Gap	Ending AR
0 period(s)	0	0	100	0	0
1 period(s)	-60	60	100	0	100
2 period(s)	-120	120	100	20	200

Receivables are fixture billings not received by period 4; this is not an accounting subledger balance.

Use this pack to test file production, not to approve a transaction

- 01 Reporting entity, framework and transaction source: NOT ASSESSED.
- 02 Tax, revenue recognition and statutory presentation: NOT ASSESSED.
- 03 Independent Controller, language-owner and client review: NOT ASSESSED.
- 04 Before real use, reperform against an approved source contract and reconcile outputs.**

No client, market, tax or financing claim is made. Do not publish or use as a client pack.
