

Collection delay changes temporary cash needs

Synthetic cash timing only /
SCU is not a real currency

Scenario	Lag (periods)	Total billings	Cash trough	Funding need	Assumed buffer	Unfunded gap	Ending receivables
Scenario: no lag	0	400	0	0	0	75	0
Scenario: one-period lag	1	400	-60	60	60	75	100
Scenario: two-period lag	2	400	-120	120	75	45	200

SYNTHETIC ONLY / Arithmetic illustration; see Inputs for scope limits.

Synthetic collection-timing inputs

Field	Value	Unit / boundary
Periods		4 periods
Opening cash		0 SCU
Monthly billings		100 SCU/period
Monthly cash costs		60 SCU/period
Available liquidity		75 SCU; assumed buffer, not committed funding
Collection rate		100 %; simplified test assumption
Scenario: no lag		0 periods
Scenario: one-period lag		1 periods
Scenario: two-period lag		2 periods
Scope	SYNTHETIC ONLY	No client, market, tax or accounting conclusion.
Source	P13-SYNTHETIC-CASH-TIMING-FIXTURE	Values reproduce the bounded P13 synthetic fixture for document-format testing; no customer, market or accounting source was supplied.

Monthly cash bridge by synthetic collection lag

Scenario	Period	Billings	Cash receipts	Cash costs	Opening cash	Closing cash	Collection lag
Scenario: no lag	1	100	100	60	0	40	0
Scenario: no lag	2	100	100	60	40	80	0
Scenario: no lag	3	100	100	60	80	120	0
Scenario: no lag	4	100	100	60	120	160	0
Scenario: one-period lag	1	100	0	60	0	-60	1
Scenario: one-period lag	2	100	100	60	-60	-20	1
Scenario: one-period lag	3	100	100	60	-20	20	1
Scenario: one-period lag	4	100	100	60	20	60	1
Scenario: two-period lag	1	100	0	60	0	-60	2
Scenario: two-period lag	2	100	0	60	-60	-120	2
Scenario: two-period lag	3	100	100	60	-120	-80	2
Scenario: two-period lag	4	100	100	60	-80	-40	2
