

Proposal: keep the output test

Internal decision brief / No fee, client or delivery commitment

SYNTHETIC TEST DATA - internal output-format demonstration

Decision requested

Keep this pack as a synthetic, local production test while domain and recipient review gates remain open. It is not a client deliverable or a request to publish or spend.

Why this test

The same limited collection-timing example is carried into four editable formats. That makes it possible to check whether figures, caveats and table structure survive document, workbook, slide and PDF production.

What the pack demonstrates

Output	Test performed	Limit
Research report DOCX/PDF	Source note, conclusion limits, chart, long repeated-header table and bilingual sample.	No external research or human translation review.
Cash timing XLSX/PDF	Editable assumptions, linked formulas, summary, chart and print view.	Not a business plan, forecast or financial statement.
Executive PPTX/PDF	Conclusion titles, comparison chart, action boundaries and slide export.	No real sponsor brief or live-room test.

Evidence and objection

The synthetic calculation is independently reproducible from the four-period input table; billings and costs remain fixed across scenarios. A reasonable objection is that good local rendering does not prove compatibility with every customer's Office version, printer, font set or accessibility workflow. That objection is valid, so this output is evidence of one local toolchain only.

Boundaries

- No customer, product, geography or market denominator is established.
- Revenue recognition, reporting framework, tax and statutory treatment are NOT_ASSESSED.
- No actual financing source, approved threshold, transaction or management decision is represented.

Recommended next step

Retain the generated source files and render manifest for internal format testing. Obtain a named language reviewer, domain owner and recipient-application check before any client-facing use. No budget or timeline is proposed because no sponsor scope was supplied.
